Practice overview

Purpose of the page

The page aims to be an high level overview of the practice.

At the top of the page there is an drop down allowing teh user to select the last 7,30,45,60, 90, 180 or 365 days.

At the side of the page there is a filter pane allowing you to filter on the following attributes: doctor, location, procedure,

The page starts of by showing tiles/metrics of the total billings, outstanding billings, and total procedures performed over the selected time period.

Below this please make space for a metric (wide containing an insight that describes the trend based on the previous equivalent period.

It then shows a line graph showing the total billings and the outstanding billings at an weekly level.

After this it shows an horizontal bar graph showing the total billings for each doctor (ordered from smallest to largest) with a legend being the types of procedures. The idea is to see how doctors earn their revenue. This graph must update based on the inputs from the filters and the analyse by.

Below this create a graph that shows the total number of billings per doctor and next to it the total number of procedures per doctor on a secondary axis. this needs to be an normal bar chart.

Please also create a button that can be clicked on to download the billing summary data in a csv or pdf report.

Below this please show a bar chart displaying the number of procedures performed at any given hospital.
